

Network as a Service

A secure, intelligent network that adapts to your business - from edge to cloud.

Inteltel unifies connectivity, security and operations in a flexible managed-service model - giving your organization the performance, visibility and control to support hybrid work, cloud applications and connected devices.

The network should accelerate change - not slow it down.

Distributed users, multicloud workloads and rapidly growing device estates have made traditional network operations harder to scale. Inteltel Network as a Service brings the technologies and expertise together in one operating model.

Managed Campus Networks

Automated, policy-driven wired and wireless networking for consistent experiences across offices, branches and campuses.

Managed SD-WAN & SASE

Application-aware connectivity combined with cloud-delivered security for users, sites and workloads.

Cloud & Data Center Connect

Secure, high-performance access between enterprise locations, private infrastructure and cloud environments.

IoT & Mobility Connectivity

Reliable connectivity and centralized visibility for sensors, assets, vehicles and distributed edge devices.

AI-Driven Network Operations

Monitoring, analytics and automation that help identify issues early and accelerate resolution.

Integrated Security

Identity-aware access, segmentation and threat protection applied across the network edge and cloud.

Business outcomes that matter

A modern network foundation helps the enterprise move faster, operate with greater confidence and deliver better digital experiences.

01**Improve digital experiences**

Deliver consistent access and application performance for employees, customers and partners.

02**Simplify network operations**

Consolidate monitoring, management, reporting and support through a unified service model.

03**Increase agility and scale**

Add sites, users, services and cloud connections without redesigning the entire network.

04**Strengthen security**

Apply consistent access and security policies across branches, remote users, clouds and devices.

05**Optimize performance and cost**

Use intelligent routing, analytics and lifecycle management to align resources with demand.

06**Support continuous innovation**

Create an adaptable platform for hybrid work, IoT, automation and AI-enabled applications.

A complete lifecycle approach

Why IntelTel?

One accountable partner

Strategy, engineering, deployment and ongoing management aligned through a single team.

Enterprise-ready architecture

Resilient, scalable designs that integrate with your existing carriers, clouds and technology platforms.

Security by design

Zero Trust principles and integrated controls built into the network transformation roadmap.

Continuous improvement

Service reviews, capacity insight and optimization recommendations that keep the environment aligned with business needs.

Build a network ready for what comes next.

Talk with IntelTel about a secure, scalable Network as a Service strategy.
